

Distributed Deep Learning HW 1

Rajeev Atla

The Resnet18 model was trained on the CIFAR10 dataset for 20 epochs. The learning rate was set to 0.01, and all other settings were left default. An A100 GPU was used in NSERC Perlmutter's shared queue. PyTorch Lightning was used for ease of training. Below is the training and validation accuracy over the 20 epochs.
